

Test Report

Project: Indian Post Payments Bank (IPPB) Website

Tested By: Sejal jawalkar

Test Date: 31-Jan-2026

Environment:

Operating System: Windows 10

Browser: Google Chrome v120

Internet Speed: 50 Mbps

Test Summary Report Identifier:

TSR-IPPB-2026-01 – Unique ID for the test summary report.

Summary:

Testing was performed on the Indian Post Payments Bank (IPPB) website to verify core functionalities such as homepage access, user login, account services, fund transfer, balance enquiry, customer support, and logout functionality.

Variances:

Minor issues were observed during testing, such as slight delays in page loading during peak hours and OTP delivery delay in rare cases. Some non-critical UI elements required improvement. No major functional defects were found.

Comprehensiveness:

High-priority and medium-priority modules such as authentication, balance enquiry, fund transfer, and security features were fully tested. Low-priority features like FAQs and informational pages received limited testing.

Summary of Results:

Most test cases passed successfully. Issues identified included minor UI alignment problems and occasional slow response times. All critical defects were resolved, and remaining minor issues were deferred for future enhancement.

Evaluation:

The Indian Post Payments Bank website is stable, secure, and user-ready. It meets the required quality standards, and no major defects remain open. The application is suitable for end users.

Activities Summary :

Activities included requirement analysis, test planning, test case design, test environment setup, functional testing, UI testing, security testing, defect reporting, retesting, and regression testing. Manual testing techniques were used to verify the overall functionality and usability of the IPPB website.

Approvals :

The test report was reviewed and approved by the QA Lead, Test Manager, and Project Manager. Based on the test results, the system is considered stable and ready for production use.
